“FUELS FROM HELL or FUELS FROM HEAVEN”  
(142”H X 86”W X 32”D)

The message is that fossil fuels are our worst enemy: dirty, expensive, diminishing in quantity and are at the core of worldwide enmity. Wind however, is pure, limitless, and impossible to own or manipulate. Hence the old oil drum exploding and the new wind turbine emerging; utilizing clean and ever present, (invisible) wind.

Wind is invisible until it is moving through or against an object like grass, sails, or turbine blades. Only then does wind become tactile. Oil and coal are forever tactile: visible, dirty, smelly, and sticky. And they leave a lethal waste product in our air, ground and water. Let go of the old energy sources. Choose clean resources that come from natural, easily available and inexpensive elements.

Backward with fossil fuels and filth. Forward with natural resources: Wind, Sun, Water and Plants.
